14.9 Comparison of social perception

Social perception studies were found for three countries only (Indonesia, n=8; Malaysia, n=2; and ROK, n=1). Generally, these studies involved interviews with locals, either through individual or household interviews (Table 1.2.14.15).

Further social science studies would be very useful to support the development of successful management and decrease of use of plastic waste, as well as a sustainable approach to a circular economy.

Table 1.2.14.15. List of publications on ‘social perception’ in ASEAN+3.
